DESCRIPTION

Front interface and Engineering Tool

Via the BlueControl software incl. its simulation functions, and especially the convenient BluePort front panel interface, the required set-up for a specific control task can be determined without a detailed study of the operating instructions.

Plug-in module

KS 40-1 controllers are built as plug-in modules. This enables them to be replaced very quickly without tools, and without disturbing the wiring. Off course almost all adjustments can be done comfortably over the instrument front. (see page 4, BlueControl)

Password protection

The access to the limit value is protected with a password and the internal security switch.

ACCESSORY EQUIPMENT

BlueControl (Engineering Tool)

PC-based program for configuring, setting parameters, and operating (commissioning) the TB 40-1 temperature limiter. Moreover, all the settings are saved, and can be printed on demand.

Depending on version, a powerful data acquisition module is available, complete with trend graphics.

Software requirements:

Windows 95/98/NT/2000.

The built-in simulation serves to test the settings.

Configurations that can only be implemented via the BlueControl software (not via the front-panel keys):

- Customer-specific linearizations
- Adjustment of limits for operating hours and switching cycles
- Switch-over to 60 Hz mains frequency
- Disable operator actions and operating levels, plus password definition

Hardware requirements:

A PC adapter (see „Accessories“) is required for connecting the controller.
